

StretchRX

AIS Smart Project Proposal Documentation

Group Members: Alekzander Brysch, Diego Villarreal, Dyllan Darby, Raul Ortega

Target Audience:

Injury Prone and/or Injured People(s)

Main Issue:

Recovering from injuries or surgeries can be a challenging journey, often requiring precise and dedicated rehabilitation efforts to regain overall wellness. However, many individuals face significant hurdles during their post-rehabilitation phase. Traditional rehabilitation programs often offer generic or one-size-fits-all approaches to stretching and recovery, which may not adequately address the unique needs and circumstances of each individual. The lack of personalized guidance and ongoing support can hinder progress and increase the risk of re-injury. Without access to comprehensive resources and expert guidance, individuals may struggle to navigate their recovery journey effectively, leading to frustration, setbacks, and prolonged recovery times. As technology continues to advance, there is a growing need for innovative solutions that leverage digital platforms to deliver personalized and effective post-rehabilitation stretching programs. While some online resources exist, they may not offer the level of interactivity or support necessary to optimize recovery outcomes. The problem lies in the inadequacy of current post-rehabilitation stretching solutions to address the needs faced by individuals recovering from injuries or surgeries. There is a clear need for a more accessible and effective approach to post-rehabilitation stretching that empowers individuals to regain mobility, prevent re-injury, and achieve optimal wellness.

Our Solution:

Our solution is to create a post-rehabilitation stretching platform that offers expert up to date options, and comprehensive support to individuals recovering from injuries or surgeries. By leveraging current technology and evidence-based practices, we encourage users to regain mobility, prevent re-injury, and achieve optimal wellness in a user-friendly and accessible manner.

Prototype/Model:

Our front page of our prototype will look like this. There's a diagram on the human anatomy body with a few points around the bodies where we will have our different exercises and stretches pertaining to those muscles in the area of the dot. When the buttons are clicked, it will bring you to a different page where the stretches will be explained and/or linked with photos and videos.

StretchRX

Shoulder Stretches

Shoulder Rolls

1. Stand with your feet shoulder-width apart and arms relaxed at your sides
2. Begin by rotating your shoulders forward in large circles
3. Then reverse the movement and rotate them backward
4. Maintain a straight back and breathe normally throughout the exercise

External Rotation Shoulder Stretch

1. Stand Straight

StretchRX

Wrist Stretches

Resisted Wrist Flexion

1. Sit or stand with your forearm supported on a table or your thigh, palm facing up
2. Hold a weight (such as a dumbbell or resistance band) in your hand with your wrist hanging off the edge
3. Slowly curl your wrist upward, bringing the weight towards your forearm
4. Pause briefly at the top of the movement, then slowly lower the weight back down
5. Repeat for the desired number of repetitions

Resisted Wrist Extension

StretchRX

Hamstring Stretches

Knee-to-Chest Stretch

1. Stand with your feet shoulder-width apart and arms relaxed at your sides
2. Bend one knee and bring it towards your chest, clasping your hands around your shin or behind your thigh
3. Keep your other leg extended straight on the floor
4. Gently pull your knee closer to your chest until you feel a comfortable stretch in your buttocks and lower back
5. Hold the stretch for 20-30 seconds, then switch legs and repeat.

Standing Forward Bend

StretchRX

Quad Stretches

Floor Quad Stretch

1. Begin by kneeling on the floor with one leg positioned in front of you
2. Bend the knee of the leg behind you and reach back to grab your foot with your hand
3. Then gently pull your foot up towards your buttocks
4. Hold this stretch for approximately 30 seconds before switching sides

Chair Quad Stretch

Budget for StretchRX Website	
Website	StretchRX Spending Costs:
Discovery	
Market research	\$20,000
Competitor research	\$5,000
Design	
Wireframing	\$500
Layout design	\$1,000
Information architecture	\$36,000
Graphics and UI/UX design	\$32,000
Content creation	\$500
Development	
Frontend	\$6,000
Backend	\$10,500
Content management system	\$5,000
Therapy Chat AI Bot	\$2,000
Recurring Fees	
Domain name	\$20
Web hosting	\$3,000
SSL certificate	\$60
Tech Support	\$57,600
Total	\$179,180 (\$60,680 per yr after)

This budget provides a detailed allocation for developing and maintaining a website, segmented into distinct areas. Initial spending focuses on extensive market and competitor research to guide the strategic planning of the website. The design phase includes wireframing, layout design, information architecture, graphics and UI/UX design, and content creation, ensuring a robust and user-friendly interface. Development costs cover frontend and backend infrastructure, a content management system, and a therapy chat AI bot to enhance user interaction. Annual expenses ensure continued support for domain registration, web hosting, SSL certification, and comprehensive tech support. This structured budgeting

ensures that every critical component—from research to maintenance—is adequately supported, fostering functionality and security for the website.
